FRAMEWORK

EUCS – High

NRY Federal Deployment runs your application inside NRY’s assessed federal environment — the same accredited estate that carries NRY’s own platforms. This sheet summarises the assurance frameworks the environment is assessed against, and what your application inherits by running inside it.

For the full picture — process, technical details, and the comparison against the direct accreditation path — see the Federal Deployment whitepaper at nrypartners.com/explore/federal-insights.

SCOPE IN THE NRY FEDERAL ENVIRONMENT

The EU-wide cloud assurance scheme at its highest assurance level. The NRY federal environment is assessed for sovereign estates carrying classified workloads; your application inherits the environmental controls of that assessment.

BSI C5

The German federal cloud attestation. The environment’s C5 attestation covers the infrastructure, platform operations, and the change-management regime enforced through Nightfall.

SecNumCloud

The French sovereign qualification. Supported for estates that require it; qualification scope is coordinated per deployment with the Federal Deployment team.

ISO/IEC 27001

The information-security baseline underlying the environment’s operation — management system, risk treatment, and continuous improvement across the estate.

Accreditation —Fact Sheet

WHAT YOU INHERIT

Environment controls

Boundary protection, validated encryption, identity integration, logging, and monitoring — operated and evidenced by NRY, inherited by your application.

Change management

Every release and configuration change flows through Nightfall with approval policies and a fully auditable history — the regime the attestations require, enforced by the platform.

Continuous compliance

Container vulnerability scanning with enforced remediation, SBOM support, and continuous monitoring evidence produced by the environment itself.

Authorisation support

NRY supports your authorisation conversations with artifacts, control assessments, and monitoring evidence. You sell your product independently; the environmental mountain is already climbed.

Getting started →

Containerise your application, meet the application-level security bar, and the environment carries the rest. Reach the Federal Deployment team through nrypartners.com/contact or via your NRY contact.
